nation. As many parents know firsthand, the number one reason that children under 10 years of age go to the Doctor is for treatment of Ear Pain. In addition, many statistics indicate that the number one outpatient surgical procedure for children under 10 is the surgical insertion of ear tubes. For years, the medical field favored antibiotics and ear tubes to address acute ear pain and chronic ear infections. Today the general position of the medical community is to treat the pain while allowing the body to heal itself which usually happens in 3 - 5 days. The focused heat provided by the Ear Ease promotes the opening up of the Eustachian tube in the middle ear, often producing a significant reduction of both pressure and pain.
